

Martyna Rzelewska-Piekut, Poznan University of Technology in Poznan, Poland, Faculty of Chemical Technology. The subject of my scientific interests is the recovery of platinum group metals from spent automotive converters using hydrometallurgical techniques (leaching, liquid-liquid extraction, precipitation). I also deal with the degradation of pharmaceuticals in an aqueous environment in the presence of catalysts based on platinum group metals. I conduct classes with students in the field of Fundamentals of Chemical Technology (lecture, projects, laboratories). I am also the supervisor of the PUTChemistry scientific club and an academic Tutor.
